Simple Ways to Engage Students in STEM

*STEM can be a lot of fun to teach and to learn.
Here are 5 simple ways to engage your students in the FUN!*

Try things – without fear of failing. Teach your students that failure is part of the process, and that it's okay. That's how we learn.

Ask questions.
Instead of giving them the answers, ask questions of your students and let them come up with the answers.

Make sure that everyone has a voice, and feels comfortable speaking up.

Have small goals in mind. Celebrate the small goals along the way to a bigger one. Successful at programming a string of code? **Awesome!**

Let students touch things. The equipment, the ingredients, the technology. Hands-on is more fun and makes things relevant.
